

CREATING HTML FROM A TEMPLATE

**WEBDEV@RGU**

The purpose of this tutorial is to give you an understanding into how you can create the HTML from a web page template. Before attempting this tutorial you should have a rough understanding of the different semantic HTML elements and have a good idea into how HTML pages are structured.

Follow the slides along and attempt to copy out pieces by yourself. Once you are completed you'll want to try to replicate this process on another page of your own choosing.

# Going to create this HTML page from a template

```

Remember, this is only the HTML (the structure)  
We still need to make the CSS (the design)
